

Claim Amendments:

Please amend claims the claims as follows:

- 1. (currently amended) A portable powered cleaning device, comprising:
 - a housing;
 - a motor mounted in the housing so that a drive shaft of the motor extends adjacent a bottom opening of the housing;
 - a carrier coupled to the drive shaft through the bottom opening and mounted to the housing so as to reciprocate with respect to the housing when the drive shaft is moved;
 - a cleaning attachment removably attached to the carrier; and
 - a separate packet [[of]] having therein a surface treatment composition, the packet being disposed between the cleaning attachment and the carrier and controlling release of the surface treatment composition through the cleaning attachment.
- 2. (original) The device of claim 1, wherein the packet is water dissolvable.
- 3. (original) The device of claim 2, wherein the packet is made of polyvinyl alcohol.
- 4. (original) The device of claim 1, wherein the packet is perforated and includes a peel off layer covering the perforations.
- 5. (original) The device of claim 1, further including a rechargeable battery disposed in the housing for powering the motor.
- 6. (original) The device of claim 5, further including a power switch electrically coupled between the battery and the motor.
- 7. (original) The device of claim 6, further including an interrupt switch electrically coupled between the power switch and the battery.

8. (original) The device of claim 1, wherein the carrier can reciprocate between about 2,500 and 10,000 cycles per minute.
9. (original) The device of claim 1, wherein the cleaning attachment is generally triangular.
10. (original) The device of claim 1, wherein the cleaning attachment is made of a material selected from the group consisting of: cloth, micro-fibers, rubbers, polymers, bristles and foams.
11. (original) The device of claim 1, wherein the surface treatment composition is in a form selected from the group consisting of: liquid, gel, paste, solid and granular.
12. (original) The device of claim 1, wherein the surface treatment composition is selected from the group consisting of: cleansers and polishes.
13. (original) The device of claim 12, wherein the surface treatment composition has a chemical selected from the group consisting of: surfactants, solvents, chelants, biocides, builders, abrasives, polymers, pH adjusters, bleaches, waxes, silicones, fluorocarbons, perfumes and dyes.
14. (original) The device of claim 1, wherein the carrier includes a substantially rigid body coupled to the drive shaft by a bearing having an outer race fixed with respect to the carrier.
15. (original) The device of claim 14, wherein the carrier further includes a plate attached to a bottom side of the carrier.
16. (original) The device of claim 15, wherein a foam layer is adhered to an underside of the carrier plate.

17. (original) The device of claim 16, wherein a hook fastener is adhered to an underside of the foam layer.

18. (original) The device of claim 15, wherein a hook fastener is adhered to an underside of the carrier plate.

19. (original) The device of claim 1, further including a lamp capable of projecting a light from a frontal area of the housing, the lamp being electrically coupled to a battery.

20. (original) The device of claim 1, wherein the carrier is driven in an orbital path.

21. (currently amended) A portable powered cleaning device, comprising:
a housing;
[[a]] at least one flex mount fixed to the housing, each having at least one a plurality of flexible elongated member pillars;
a motor mounted in the housing and having a drive shaft;
a carrier mounted to the flex mount and eccentrically coupled to the drive shaft so that when the drive shaft is moved the carrier reciprocates in a plane essentially parallel to a bottom of the housing; and
a cleaning attachment removably attached to the carrier.

22. (original) The device of claim 21, further including a surface treatment composition.

23. (original) The device of claim 22, wherein the cleaning attachment is impregnated with the surface treatment composition.

24. (original) The device of claim 23, wherein the surface treatment composition has a liquid.

25. (original) The device of claim 23, wherein the surface treatment composition is dry.

26. (original) The device of claim 22, further comprising a packet containing the surface treatment composition and disposed between the carrier and the cleaning attachment.

27. (original) The device of claim 26, wherein the packet is water dissolvable.

28. (original) The device of claim 26, wherein the packet is perforated and includes a peel off layer covering the perforations.

29. (original) The device of claim 22, wherein the carrier travels in an orbital path.

30. (currently amended) A portable powered cleaning device, comprising:
a housing having a lower opening;
a battery powered motor mounted in the housing, the motor having a drive shaft;

a carrier coupled to the motor so as to reciprocate with respect to the housing;

a cleaning attachment removably attached to the carrier; and
a scrub brush having bristles external to the cleaning attachment and mounted to the carrier to be able to reciprocate therewith when the drive shaft is rotated, wherein the scrub brush includes an elongated body disposed between the carrier and the cleaning attachment.

31. (original) The device of claim 30, wherein the scrub brush is detachable from the carrier.

32-59. (canceled)--
